

Security Locking Bracket assembly
16MARCH2017

Back plate attaches to the back side of the JuiceBox enclosure with the 4 (included) screws

“Goal Post” bracket mounts to the wall, center tab pointed down as shown. (screws included)
Slide the JuiceBox with bracket attached (tabs) into the slots on the wall bracket to hang.
The bottom tab from the backplate can also be used to attach the JuiceBox to the wall for more stability if needed.

Once the Juicebox has been slid into the wall bracket and is hanging, the locking bar inserts across the goal post slots. You'll want to send the end with the hole thru both slots, and once it comes thru the second slot, a padlock can be used to secure it into place.
